4.3 MORE INFORMATION

If you want for rt2860 driver to auto-load at boot time:

A) choose ra0 for first RT2860 WLAN card, ra1 for second RT2860 WLAN card, etc.
B) create(edit) 'ifcfg-ra0' file in /etc/sysconfig/network-scripts/,
edit(or add the line) in /etc/modules.conf:
alias ra0 rt2860sta
C) edit(create) the file /etc/sysconfig/network-scripts/ifcfg-ra0
DEVICE='ra0'
ONBOOT='yes'

NOTE:

if you use dhcp, add this line too.
BOOTPROTO='dhcp'
D) To ease the Default Gateway setting,
add the line
GATEWAY=x.x.x.x
in /etc/sysconfig/network

6 WPS – WI-FI PROTECTED SETUP

Simple Config Architectural Overview

This section presents a high-level description of the Simple Config architecture. Much of the material is taken directly from the Simple Config specification.

Figure 1 depicts the major components and their interfaces as defined by Wi-Fi Simple Config Spec. There are three logical components involved: the Registrar, the access point (AP), and the Enrollee.

The Enrollee is a device seeking to join a WLAN domain. Once an Enrollee obtains a valid credential, it becomes a member.

A Registrar is an entity with the authority to issue and revoke domain credentials. A registrar can be integrated into an AP.

The AP can be either a WLAN AP or a wireless router.

Components and Interfaces

Registration initiation is ordinarily accomplished by a user action such as powering up the Enrollee and, optionally, running a setup wizard on the Registrar (PC).

```

7.7.2 Statistic counter operation

```
iwpriv ra0 stat                 # read statistic counter
iwpriv ra0 set ResetCounter=0   # reset statistic counter
```

7.7.3 Suggestion:

1. To turn on ATE functionality, you have to add compile flag "RALINK_ATE" to Makefile
2. Before doing ATE testing, please stop AP function
3. If you want to test another ATE action, prefer to stop AP & ATE function
4. All ATE function settings will lose efficacy after reboot.
5. Before hardware register access, please reference hardware spec.

Note.

In ATE mode, the channel must set via "ATECHANNEL"

7.8 ATED

ated - user space ATE agent program for RT2860 linux driver, Ralink Tech. Corp.

RT2860 ATE daemon - ated, which comes with RT2860 linux driver.

Here will explains the relationship between the linux driver, Windows QA GUI and RT2860 ATE daemon.

In addtion, this will teach you how to use this ATE daemon.

7.8.1 Introduction

The ated is an optional user space component for RT2860 linux driver.

When ated starts, AP enters ATE mode (i.e. ATESTART) immediately.

It behaves as a proxy between Windows QA GUI and RT2860 linux driver when ATE process proceeds.

And ated will be killed automatically when Windows QA GUI is closed.

You can kill it manually, too (for example, type '$killall ated').

RT2860 linux driver will leave ATE mode either ated is killed or QA GUI is closed.

7.8.2 Environment setup

1. Connect the platform you want to test directly with a Windows host by ether network line.
2. In the Windows host, run WinPcap_4_0.exe for the QA GUI.

7.8.3 How to use ated for ATE purpose

1. First you should set both "HAS_ATE=y" and "HAS_2860_QA=y" in the file ~/Module/os/linux/config.mk and compile the driver.
2. Modify the Makefile according to our target "PLATFORM".
3. Change the path of "CROSS_COMPILE" if needed.
4. Remove "-I$(INCLUDE)" about in line 39 if your target "PLATFORM" is not "PC".
5. Then type 'make' command to compile the source code of the daemon.
6. After the driver interface "ra0" has started up, attach both of "ra0" and the ethernet interface to the bridge interface "br0".
7. Manually start ated, type '$ated -bbrX -iraX'.(For further usage of options, type $ated -h)
8. In the Windows host, run RT2860QA_ATE.exe.
9. Select the wired network adapter.
10. Choose 2860_ATE, and then press OK.

Note:

The names of WLAN interface (default is "ra0") and Bridge interface(default is "br0") must be specified manually (for example : '$ated –b br1 –ira2') if your WLAN interface or Bridge interface is not "ra0" or "br0" respectively !
